The Maury Island Aquatic Reserve includes the tidelands and bedlands of navigable waters owned by the state of Washington as described in the legal description. The legal description can be found at

The reserve boundary is illustrated by the following lines:

- 
- Shoreline  
Mean Low Tide  
Extreme Low Tide  
Meander Line  
Meander Line approximation (no data)  
Platted Line  
Aquatic Reserve Boundary  
Protracted Line

 Depth contours (feet), 0 = MLLW (NOAA)

Imagery: 2011 Washington orthophoto, 3 foot resolution (NAIP)

## Vessel Swing Radius, Scope = 1.5

Anchor line length and vessel swing radius calculated as follows:

Measured depths were adjusted by adding an assumed 1 foot depth-finder transducer offset and the tidal height for each buoy site.

Using tide data from the National Oceanic and Atmospheric Administration website (<http://tidesandcurrents.noaa.gov>), depth relative to the tidal datums was corrected for each buoy using the following datum information:

Station:	9446484	12.39 Mean Higher-High Water (MHHW)
Name:	Tacoma, WA	0.58 Mean Lower-Low Water (MLLW)
Units:	Feet	0.00 Station Datum
Tidal Epoch:	1983-2001	15.15 Highest Observed Water Level (EHT)
		-4.11 Lowest Observed Water Level (ELT)

The extremes were then used to find anchor line length and swing radius by the following formulas:

Anchor line length (L) = SCOPE x EHT where SCOPE is the ratio of anchor line length to water depth. Washington State Parks recommends a scope between 4 and 7 feet of anchor line for every foot of water depth. SCOPE = 1.5 was used in these calculations.

$$\text{Swing Radius} = \sqrt{(L^2) - (ELT^2)} + \text{mooring line (10ft assumed)} + \text{vessel length}$$

These results are based on Tacoma tide data and an assumed 1 foot depth-finder transducer offset. Various sources of error including tide prediction error and variation in the position of the depth sounder relative to the mooring buoy anchor are not considered here.
